Select a building and omit the room number to return a list of all courses being taught in the selected building. Results are ordered by room, then start time.

Include a room number to drill down to a roomplot. The plot identifies the course code, the instructor’s (last name only due to space constraints), start and end times, as well open time slots.

Omit the course code & section number to return a comprehensive list of courses being taught for the selected semester. Lists are ordered by course code and section number.

Enter only a department number to return a department list for the semester selected. Lists are ordered by the course code.

Department lists can be narrowed to a specific section by adding a section number. Lists are ordered by the course code. This feature will be particularly useful during summer sessions. (Thanks Amy!)

Drill down to a specific course by entering a full course code and section number.

Instructor searches are base on last name. In the event of a tie (more than one instructor with the same last name), a hyperlink list will appear. This approach minimizes empty result sets caused by first name / last name searches where middle initials are in the data. For example: 'John Doe' may exist in the database as 'John J Doe'.
All Available Rooms Search returns a comprehensive report which identifies occupied and unoccupied rooms for the Spring and Fall semesters. Required search criteria includes: start/end time, day of week, and semester.

Semester: Fall 05

<table>
<thead>
<tr>
<th>All Available Rooms Search</th>
<th>Start Time: 8:00AM</th>
<th>End Time: 8:50AM</th>
</tr>
</thead>
<tbody>
<tr>
<td>Day of Week:</td>
<td>Mon ○</td>
<td>Tue ○</td>
</tr>
</tbody>
</table>

Turning on Gridlines in Microsoft Excel

Select 'Options…' from the 'Tools' menu bar

Now click the 'View' tab from the Options panel, check the 'Gridlines' checkbox and click 'OK'
